TECHNICAL SKILLS

Languages: Java, Python, SQL

Data Science & Analytics: Pandas, NumPy, Matplotlib, Statistics, Power BI, Excel, Google Sheets, ETL

Databases & Tools: MySQL, SQLite, Git, GitHub

Core Concepts: Data Structures & Algorithms, DBMS, Object-Oriented Programming (OOP)

EDUCATION

Vellore Institute of Technology

Expected May 2027

B.Tech in Computer Science (CGPA: 8.40/10)

EXPERIENCE

Siemens Ltd.

May 2025 – June 2025

Summer Intern

- Developed a Python-based desktop application to automate PCB quality inspection by integrating log files, Excel datasets, reference images, and SQLite into a unified workflow.
- Built OCR and computer vision pipelines using OpenCV and Tesseract to extract, process, and validate inspection data, reducing manual effort and improving efficiency.
- Collaborated with engineering teams to debug, test, and optimize the application, enhancing reliability, maintainability, and deployment readiness.

PROJECTS

Algorithmic Trading Simulator | *Python, Pandas, NumPy, yFinance, Streamlit*

Ongoing

- Built an event-driven algorithmic trading simulator for NSE equities with historical OHLCV data, market/limit/stop orders, transaction costs, slippage, and ATR-based position sizing.
- Implemented technical-analysis strategies using SMA/EMA, RSI, MACD, and Bollinger Bands with portfolio-level risk controls and Nifty 50 benchmarking.
- Developed market-regime detection and synthetic regime injection to evaluate strategy performance across bull, bear, sideways, and high-volatility conditions.
- Added automated backtest bias checks for look-ahead, survivorship, and overfitting risks, with an LLM-based explainability layer that converts computed results into grounded performance insights.

Restaurant Business Analytics Dashboard | *Python, SQLite, Pandas, Streamlit*

May 2025

- Developed an interactive restaurant business analytics dashboard using Python, SQL, and Streamlit to analyze transaction-level sales, customer behavior, menu performance, and operational trends.
- Built an ETL pipeline to extract, profile, validate, clean, and transform raw transaction data into analysis-ready datasets for downstream analytics.
- Designed and populated a structured SQLite database and generated analytical datasets covering revenue trends, product performance, customer behavior, payment methods, and peak sales periods.
- Delivered KPI dashboards and actionable business insights to support operational decisions such as peak-hour staffing, menu optimization, and sales performance monitoring.

CERTIFICATIONS & ACHIEVEMENTS

Google Data Analytics Professional Certificate – Completed comprehensive program covering data cleaning, analysis, visualization, and decision-making.

Solved 200+ DSA problems across LeetCode, CodeChef, and Codeforces.

Design Team Member, ELA: Led visual design for 10+ campus events, increasing event engagement by 25%.

Participated in the Health Hackathon and created a mental wellness platform for students and universities.
