PROFILE SUMMARY

B.Tech Computer Science student passionate about logic-driven problem solving, uncovering patterns in data, and building data-driven solutions. Hands-on experience creating automation and analytics systems, including a production-style QA tool. Skilled in Python, SQL, and Power BI, with a growing interest in Data Analytics and Data Science. Seeking fresher roles in Data Analytics, Data Science, Data Engineering, or Software Development.

TECHNICAL SKILLS

Languages: Java

Data Science: Python, Pandas, NumPy, Matplotlib, Statistics, ETL fundamentals

Data Engineering: MySQL, SQLite

Visualization: Power BI, Excel, Google Sheets

Tools & Platforms: Git/GitHub

Core CS: Data Structures & Algorithms, DBMS, OOPs

INTERNSHIP EXPERIENCE

Siemens Ltd. — Summer Intern

May 2025 – June 2025

- Developed a Python-based desktop application to automate PCB quality inspection by integrating log files, Excel datasets, reference images, and SQLite into a unified workflow.
- Built OCR and computer vision pipelines using OpenCV and Tesseract to extract, process, and validate inspection data, reducing manual effort and improving efficiency.
- Collaborated with engineering teams to debug, test, and optimize the application, enhancing reliability, maintainability, and deployment readiness.

PROJECTS

Algorithmic Trading Simulator

Ongoing

- Built a rule-based algorithmic trading simulator that analyzes historical stock market data and generates buy/sell signals using technical indicators.
- Implemented Moving Average Crossover strategy logic for trade simulation and profit/loss analysis.
- Built portfolio performance visualization and trade-history tracking with an interactive Streamlit dashboard.
- Used Python for data preprocessing, time-series analysis, and financial data visualization with historical data pulled via yFinance.

Tech Stack: Python, Pandas, NumPy, yFinance, Streamlit

Restaurant Business Analytics Dashboard

- Developed an interactive restaurant business analytics dashboard using Python, SQL, and Streamlit to analyze transaction-level sales, customer behavior, menu performance, and operational trends.
- Built an ETL pipeline to extract, profile, validate, clean, and transform raw transaction data into analysis-ready datasets for downstream analytics.
- Designed and populated a structured SQLite database and generated analytical datasets covering revenue trends, product performance, customer behavior, payment methods, and peak sales periods.
- Delivered KPI dashboards and actionable business insights to support operational decisions such as peak-hour staffing, menu optimization, and sales performance monitoring.

Tech Stack: Python, SQLite, Pandas, Streamlit

EDUCATION

Vellore Institute of Technology — B.Tech in Computer Science

Expected May 2027

CGPA: 8.40/10

ACHIEVEMENTS & LEADERSHIP

- Solved 200+ DSA problems across LeetCode, CodeChef, and Codeforces.
- Design Team Member, ELA: Led visual design for 10+ campus events, increasing event engagement by 25%.
- Participated in the Health Hackathon and created a mental wellness platform for students and universities.
